WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two from 3 mm PVC foam board, each 528 wide x 218 tall.

Cut a U 168 wide, centred, from 20 up off the bottom edge to the top.

The core's 180 wide end then overlaps the U by 6 each side and 6 at the bottom; stick 3 mm foam gasket tape round the U on the core side.

Outdoor frame only: a 13 hole 40 left of centre (as seen from the room; drawn here as seen from outdoors), 6 up, for the drain tube.

Fit: stands on the floor lining, glued to the side lining with contact adhesive, 300 apart (inside faces) so the core fits between them; the lid's foam block closes the U above the core.

Check: the core drops between the frames without force and both ends bear on the gasket all round the U.
