WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

All 10 x 10 strip, glued to the lining with contact adhesive.

Supply seat (outdoor end, right; drawn here): a side strip 218 long against the end lining beside the filter's left edge; two lip strips 218 long 25 out from the end lining, lapping 6 over each filter edge; a bottom stop 150 x 25 x 20 under the filter.

Exhaust seat (room end, left): side strips 218 long each side of the pad against the room end lining; lip strips 12 out from it, lapping 10 over each pad edge; a bottom stop 220 x 12 x 10.

The air pushes each filter onto its lips; the lid's foam blocks press on the top edges, so no air goes round a filter.

Check: each filter slides down into its seat by hand and sits square on its lips and stop.
