WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

2 mm PETG sheet. Blank 328 x 228; fold up 14 mm on all four sides

(heat gun and a wooden former), so the tray is 300 x 200 x 14.

Seal each corner inside with a fillet of clear silicone.

Drain hole 12 in the outdoor end wall, 40 left of centre, its centre 6 up from the underside so the bore is flush with the floor.

Four pads 20 x 20 x 12 cut from PETG offcuts stacked and glued, at the four corners, 10 in from each end and 60 out from the centre line; the core sits on them, so water runs freely underneath.

Fit: sits on the floor lining between the core frames.

Check: fill with 100 ml of water with the drain tube fitted; it all runs out with the box level, and no corner weeps.

BREATHEBOX
